

MOHAMMAD RAZIM

Software Engineer | Full-Stack AI Engineer | Bangalore, India

[Email](#) [Phone](#) [Github](#) [Linkedin](#)

PROFESSIONAL SUMMARY

Software Engineer specializing in Full-Stack AI applications using Python, TypeScript, FastAPI, and Next.js. Experienced in building production-grade AI systems, developer tooling, Retrieval-Augmented Generation (RAG) pipelines, and scalable backend services with modern software architecture, distributed systems, and LLM frameworks.

TECHNICAL SKILLS

Languages - Python • TypeScript • JavaScript • SQL • C

Frontend - Next.js • React • Tailwind CSS • TanStack Query • Zustand • shadcn/ui

Backend - FastAPI • Flask • Node.js • Express.js • WebSockets

Databases - PostgreSQL • MongoDB • Redis • Pinecone

ORMs - SQLAlchemy • Prisma • Mongoose

AI / LLMs - OpenAI SDK • LangChain • LangGraph • RAG • MCP • AI Agents

Tools - Git • GitHub • Docker • Linux • Postman

Concepts - System Design • Distributed Systems • Event-Driven Architecture • Authentication & Authorization

PROFESSIONAL EXPERIENCE

Frontend Developer & UI/UX Intern | Dflix

- Developed responsive production-ready user interfaces for a Web3 movie review platform.
- Conducted user research and translated wireframes into scalable frontend components.
- Collaborated with designers and engineers to improve usability and user experience.
- Built reusable React components following responsive design principles and modular frontend architecture.

PROJECTS

Forge — Decoupled Coding Agent & Custom Harness

Tech Stack: Python, Inngest, FastAPI, CLI, Terminal UI

Github link: <https://github.com/yours-truly68/forge>

- Designed and built a decoupled event-driven execution harness orchestrating autonomous ReAct software engineering agents.
- Developed a terminal-first developer experience supporting interactive command execution, session management, and runtime model switching through CLI commands.
- Engineered durable checkpointing for recoverable execution state.
- Designed a configurable runtime layer supporting seamless switching between cloud-hosted and local LLM providers without modifying application logic.

Gale Encyclopedia RAG Chatbot: G-bot

Tech Stack: Python, LangChain, OpenAI SDK, Pinecone, Flask, PostgreSQL

Github link: <https://github.com/yours-truly68/G-bot>

- Architected and developed a Retrieval-Augmented Generation (RAG) chatbot grounded on the **Gale Encyclopedia** knowledge base, enabling factual, domain-specific question answering with source-aware responses.
- Engineered an end-to-end ingestion pipeline to preprocess, chunk, embed, and index encyclopedia documents into Pinecone, optimizing semantic retrieval quality and search latency.
- Implemented a retrieval pipeline using LangChain and the OpenAI SDK to orchestrate vector search, contextual prompt augmentation, and grounded response generation while minimizing hallucinations.
- Built a modular backend exposing REST APIs for document ingestion, semantic retrieval, and conversational querying, enabling scalable integration with web applications..

Purplexity — AI Search Engine & Conversational Assistant

Tech Stack: Next.js, Bun, Supabase, PostgreSQL, Groq, Qwen

Github link: <https://github.com/yours-truly68/purplexity>

- Architected an AI-powered search engine with streaming LLM responses.
- Integrated Tavily for contextual web retrieval.
- Engineered a streaming inference pipeline to progressively deliver LLM responses, reducing perceived latency and improving conversational responsiveness.

KANDo — Project Management Platform

Tech Stack: Next.js, TypeScript, FastAPI, PostgreSQL, SQLAlchemy, TanStack Query, Zustand

Github link: <https://github.com/yours-truly68/project-management-system>

- Built a production-grade project management platform supporting collaborative workspaces, Kanban boards, task management, and role-based access control.
- Designed a normalized PostgreSQL data model using SQLAlchemy to support workspaces, projects, Kanban boards, tasks, comments, and role-based collaboration.
- Implemented **Role-Based Access Control** (RBAC) for workspace-scoped authorization and secure resource access.
- Developed a feature-oriented frontend architecture using **TanStack Query**, **Zustand**, and reusable UI primitives, enabling efficient state management and responsive user interactions.

Jomatoes — Distributed Food Ordering Platform

Github link: <https://github.com/yours-truly68/zomato-clone>

Tech Stack: React, TypeScript, Node.js, Express.js, MongoDB, RabbitMQ, WebSockets, Razorpay

- Architected a distributed food ordering platform supporting **Customers, Restaurant Partners, and Delivery Riders** through a Role-Based Access Control (RBAC) system with secure resource authorization.
- Designed an event-driven backend using **RabbitMQ** to asynchronously coordinate order processing, inventory updates, payment confirmation, and delivery workflows, ensuring service resilience and preventing cascading failures during downstream service outages.
- Implemented real-time order lifecycle synchronization using **WebSockets**, enabling instant updates for order status, rider assignment, delivery progress, and restaurant notifications across connected clients.
- Integrated **Razorpay** for secure payment processing with server-side payment verification, transaction validation, and reliable order confirmation workflows.

EDUCATION

Ramaiah Institute of Technology | Bachelor of Engineering | CGPA: 7.65

Government Pre - University College, Sagara | 12th Std | Percentage: 99.16%

St. Joseph's English Medium High School, Mankalale, Sagara | 10th std | Percentage: 98.08%
